## Heating Element for DR560

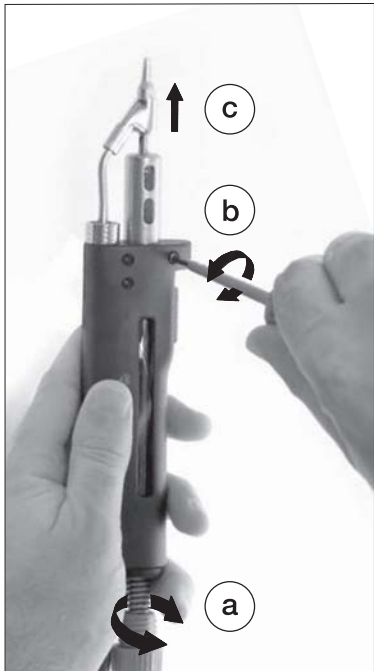

Ref. DSV-DR

## Changing the heating element

For this operation, turn off the station or disconnect the tool.

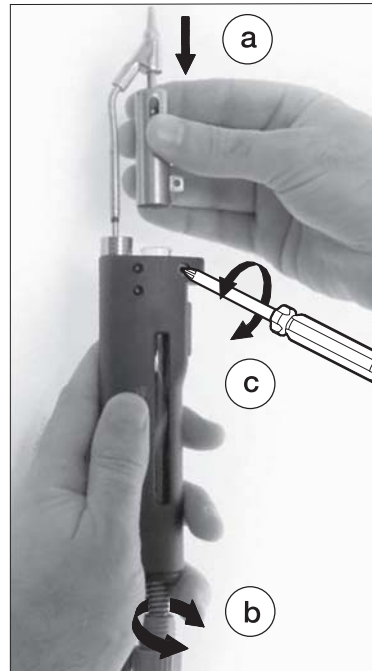

### 1. Removing

Loosen the deposit lid (a), remove the screw (b) and withdraw the heating element (c).

### 2. Placing

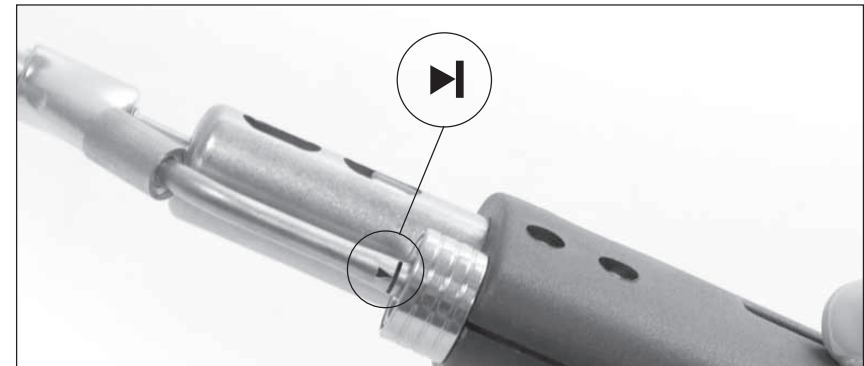

Insert the new heating element (a), tighten the lid (b) and the screw (c).

**Recommended:** Remove the lid in a vertical position to empty the tin residue and follow the cleaning guidelines in the tool and station manuals.

### Important

For a proper connection it is essential to insert the cartridge as far as the mark ►►

### Compatibility

The DSV-DR also works with the DR5600 desoldering iron (Ref. 5600010). In this case, you must take out the washer with a pliers.
